

Fibre Optic Module Box

12- and 24-Fibre Capacity

24-fibre capacity box (open)

12-fibre capacity box (closed)

24-fibre capacity box (closed)

The fibre optic module box (FO-MB) serves as an indoor distribution point for termination of internal and/or external cables.

The fibre optic module box accommodates various components such as pre-assembled connector modules, splice trays and cassettes, allowing the box to be configured for the requirements of specific applications.

Pre-assembled fibre optic connector modules significantly reduce installation time. All assembly steps can be carried out from the front without the need for cumbersome cable or fibre feed-in. This allows reconfiguration and expansion of the network to be carried out without a time-consuming and costly disconnection of the system.

The box features a double cover, designed for the installation of two different locks, allowing separate access by the service provider and the customer.

The connections in the fibre optic module satisfy EN186000.

Features

- Suitable for use as a connection unit or in-house demarcation point
- Double cover and possibility of two locks, allows separate access by the service provider and the customer
- Pre-assembled modules significantly reduce installation time
- Design permits expansion and updating of the network without disconnecting service

Material:	Sheet metal
Protection system:	IP 44
Colour:	Grey (similar to RAL 7035)
Weight (approximate):	
12-fibre capacity:	1.80kg
24-fibre capacity:	3.50kg
